

## TSS Event CAD Installation file permissions

If you have enough rights to alter user permissions then you can amend this yourself, if not you will need to get in contact with your IT support and ask them to do it for you.

You need to give full permissions to is C:\Program Files\ECBin (or C:\Program Files (x86)\ECBin if you have a 64bit operating system).

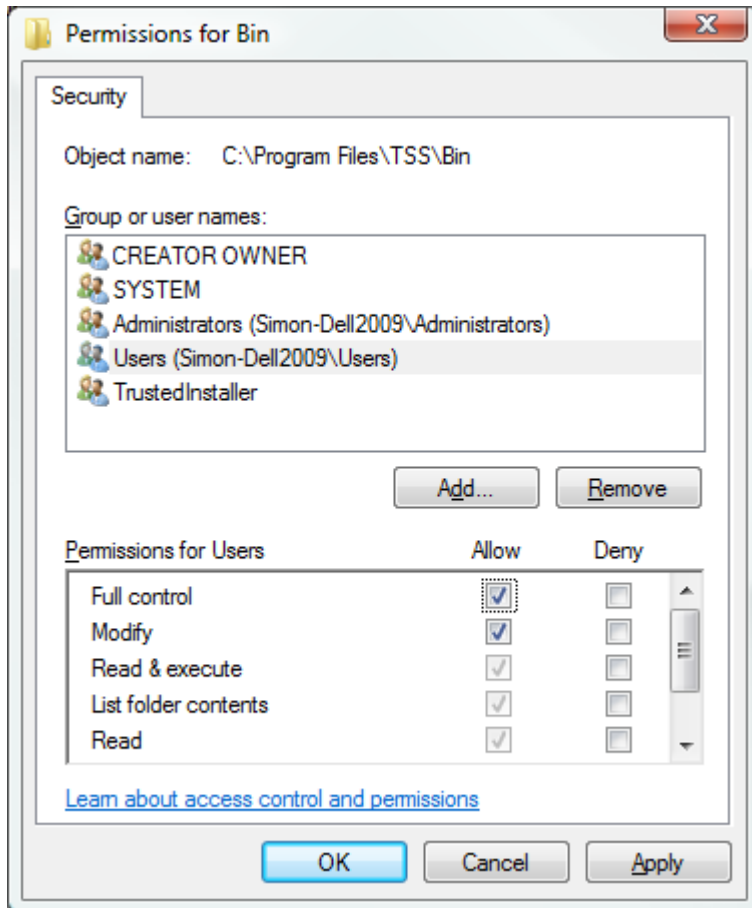

If you do have sufficient access then you can browse to the folder then right click on it and then select properties. If you go to the security tab and click on users you will see that only 3 of the options below are ticked, you need them all to be.

## TSS Event CAD Installation file permissions

To alter the permissions click on edit then reselect Users in the top window and tick the full control box under the Allow column.

Next press OK to close the window and OK on the next window to save and close that one.
